Recent Projects

1. [Reselling Bay](#) | [Github Client](#) | [Github Server](#)

It is a reselling website where you can buy or sell used books.

Technology used: MERN Stack

Top features:

- You can register yourself as a buyer/ seller. There is also an admin of the page. He can verify or remove the sellers and the buyers.
- As a buyer, you can add your products or delete them. You can eventually advertise them which will appear on the home page.
- If you're a buyer, you can book the products or add them to your wishlist. Then from the dashboard, you can pay them with any type of card.

2. [Capture The World](#) | [Github Client](#) | [Github Server](#)

It is a photographic service provider website.

Technology used: MERN Stack

Top features:

- In the service description, you can leave a review which will show right under the service description.
- In the 'My Reviews' page, you can easily update or delete your review.
- In the 'Add Service' page, you can add a service that will appear on the 'Services'.

3. [My Lingua](#) | [Github Client](#) | [Github Server](#)

It is a Language Learning Platform.

Technology used: React, Express & Node JS

Top features:

- You can explore all the courses they offer, when you click 'read more', it will take you to the details page of that course.
 - You can get premium access by registering/logging in.
 - You can change the theme (dark/light).
